

Placement and Testing procedures have changed during COVID-19. Below are program placement requirements (Welding does not require placement) and how to obtain that placement.

Eligibility for **Math 76 is required for the following programs:**

- Composites
- Engineer Tech Design
- Precision Machining

Eligibility for **Math 86 is required for**

- Mechatronics

HOW TO OBTAIN MATH PLACEMENT

Expanded Math Placement:

We have expanded our Math placement to include any high school math class completed within the last 5 years instead of 2. Students that do not have access to their high school transcripts will be placed into Math 76. Students with foreign transcripts may be asked to submit translated transcripts and course descriptions/syllabus in English to determine level.

Eligibility:

1. Students cannot have taken a Math class at EvCC.
2. Students cannot have taken the Accuplacer within the last two years.

Process:

Students who completed a math class in high school within the last five years and earned a C+ or better in both semesters (in the same year) may be placed from their high school transcript. Submit a [Placement Form](#) and high school transcript to Enrollment Services. Note: If a student is currently in their second semester of a math class, along with a high school transcript that indicates their first semester grades the student must provide a current grade report that indicates that they are earning a C+ or better to request an alternative math placement.
